Must be in good physical shape to repeatedly climb ladders, bend, crouch and crawl for an entire working shift. **Tech must also be able to operate a scissor lift for work at heights of 20 feet or more.**

Tech must have own vehicle and decent driving record.

RHEMA IS, Inc. Provides structured cabling and low voltage hardware installation to retail stores during remodel, expansion and new builds.

In a typical store we install and terminate a variety of cables including Cat5, Cat6, RG6 and fiber optic. We install Access Points, cameras, speakers, paging systems, switches, DVRs and other hardware. We will update or install new racks and trays in the MDF as well as build and install new IDF cabinets.

Every store is unique with its own challenges and obstacles. Each site takes three to six months to complete. Remodels are night work 9PM to 6AM Sunday through Thursday nights while the store is closed. New builds are daytime work, 7 AM to 4 PM Monday to Friday. Full time employees have an opportunity to travel to sites, learn the trade and grow through the ranks.
